COVER LETTER

Dear Hiring Manager,

I love the opportunity to apply for the Software Engineering position at your company. The innovative solutions your company provides to the professional and tech industry truly resonate with my passion for creating cutting-edge software that drives real impact.

During my time as a Software Engineering Intern at DAST Consulting, I spearheaded the development of innovative web applications that showcased advanced capabilities to potential business partners, subsequently fostering new collaborations. By leveraging technologies like Git, Terraform, Microsoft Azure, and CI/CD pipelines, I streamlined deployment processes, optimizing web app development for enhanced efficiency and performance.

My experience collaborating with diverse teams and managing project workflows equipped me with the skills to contribute effectively to my engineering efforts to solve complex problems. I am well-versed in Javascript/Typescript and have a basic understanding of React, Vue, and Angular. The prospect of further developing my skills and contributing to a team known for industry-leading software excites me.

I recently attained my Bachelor's degree in Computer Science and have a proven track record of delivering results in technical environments. My commitment to innovation and demonstrated skill in time management make me a strong candidate for this role.

I am eager to bring my passion for software development and problem-solving skills to your company. I would welcome the opportunity to discuss how my background, skills, and enthusiasm for cutting-edge technology align with the goals of your team. Thank you for considering my application.

Warm regards,

Kyle Ambrecht - Aspiring Software Engineer
